

Problems and Methods for Lithospheric Exploration (Ettore Majorana International Science Series: Physical Sciences)

This volume contains several contributions among those held at the fourth Course of the International School of Applied Geophysics, Erice, March 15-24, 1982. The content has been arranged according to the three main topics covered during the course: the geodynamic models, the contribution of geophysics to their construction and the optimization and constraints of the exploration methods. At the end of the volume, four short notes are published, written by participants to the course and related to the general subject. It is regrettable that not all the lectures and discussions are available for publication in this volume. However, it is hoped that the papers presented here will stimulate further discussions and suggest new topics for future meetings. R.Cassinis v CONTENTS
1 Introductory note R Cassinis
Global seismology and the investigation of deep 5
continental structure G Nolet
The relation between superficial and deep structure of 23
the Caucasus region and possible
geodynamic model V N Sholpo
Seismicity and crustal structure in the Italian region:
53 a preliminary zoning R Cassinis 93
Structure seismology I P Kosminskaya
Main features of crustal structures in
mediterranean 113 collisional zones P
Giese Potentia~ and constraints of near
vertical reflection 133 seismics in
non-sedimentary deep formations K Helbig
and J Schmoll Geoelectrical deep
explorations by means of direct currents L
Alfano 179 Reflection profiling of the
continental crust R Phinney Evidence for a
strong crust-mantle boundary undulation in
the TYrrhenian sea from a refraction
seismic 183 survey C B!)ttcher
