

Kraken Mare

Sergeant John Manning was a simple Marine who liked spicy foods, big guns, and even bigger explosions- so long as those guns and explosions weren't pointed in his direction. When offered a well-paying job after being unceremoniously drummed out of his beloved Corps on a medical discharge, he jumped at the opportunity for good money and the prospects of a bright future. For the first time in recent memory, John had a chance at life. Then his life turned into a horror movie. The secret research station hidden on the moon of Titan was not just any government facility. It harbored dark secrets and frightening realities. The scientists here have not only studied more than just the local fauna, but have discovered something far more important. A discovery which would shock the very foundations of the universe. Something out of a nightmare. The depths of Kraken Mare hid a horrifying truth, and the unwitting Marine stumbled right into it.
